Foreword

Heritage 2010, 2nd International Conference on Heritage and Sustainable Development established a state of the art event regarding the relationships between forms and kinds of heritage and the framework of sustainable development concepts. Environment, economics, society and culture, the four dimensions of sustainable development, are brought here to define a singular approach on how to deal and go beyond the traditional aspects of heritage preservation and safeguarding.

On our today's world, heritage is no longer just a memory or a cultural reference, or even a place or an object. Heritage is moving towards broader and wider scenarios, where it becomes often the driven forces for commerce, business, leisure and politics. Nowadays, sustainable development was brought much forward than the concept expressed in the book "Our Common Future", commonly known as "The Brundtland Report". The role of culture and social aspects enlarged the initial statement where environment and economics took the main role, guiding the earliest research on sustainable development.

In such a global context, heritage becomes one of the key aspects for the enlargement of sustainable development concepts. Heritage is often seen through its cultural definition. However, sustainable development brings heritage concepts to another dimension, as it establishes profound relationships with economics, environment, and social aspects. Actually, heritage preservation and safeguarding is facing new and complex problems. Degradation of Heritage sites is not any more just a result of materials ageing or environmental actions. Factors such as global and local pollution, climate change, poverty, religion, tourism, commerce, ideologies, war, are now in the cutting edge for the emerging of new approaches, concerns and visions about heritage. Thus, "Heritage 2010 – Heritage and Sustainable Development" was proposed to be a global view on how heritage is being contextualized in relation with the four dimensions of sustainable development. What has been done in terms of research, future directions, methodologies, working tools and other significant aspects of both theoretical and field approaches were the aims of this International Conference. Furthermore, heritage governance and education were brought into discussion as the key factors for enlightenment of future global strategies for heritage preservation and safeguarding.

We would like to express our gratefulness to all members of the Scientific Committee who contributed to the scientific quality of this event.

We would also like to thank all sponsors who joined this event and helped in many different ways.

Finally, we want to especially thank the patronage of the Câmara Municipal de Évora.
